

Content I/O Suite

Make Your Content Smarter

At Armedia, we believe the primary purpose of an effective ECM solution is about adding intelligence to your content so you can make the right business decisions at the right time. Adding intelligence to your content means ensuring your assets are in the right place within your ECM system so you can streamline business processes, optimize efficiency, and meet compliance requirements. Armedia Content I/O Suite is an integrated family of software products that enables you to easily collect, migrate, and deliver your content and corporate assets to where it provides the most value to your organization. Content I/O Suite consists of three modules.

- **Armedia CI/O Collect**—With Armedia CI/O Collect, efficiently capture content and metadata and deliver to the destination of your choice
- **Armedia Caliente! CI/O Migrate**—With Armedia Caliente! CI/O Migrate, automatically migrate content and metadata from flat files, databases and more, into your ECM repositories
- **Armedia Ligerio CI/O Deliver**—With Armedia Ligerio CI/O Deliver, access your repository content through extranets, portals, and external websites

Available separately or as an integrated suite, Armedia Content I/O Suite streamlines labor intensive tasks so you can get the most from your ECM implementation. Content I/O Suite currently supports Documentum, SharePoint, file systems, and custom repository destinations.

CI/O Collect

Armedia CI/O Collect is an innovative content collection and delivery solution for paper and electronic content. Easily capture paper and electronic content from multiple sources—scanners, fax servers, network folders, and more—automatically assign metadata values, and deliver to your destination repository. CI/O Collect extracts metadata from more than 300 electronic file formats, delivering content and associated metadata to various destinations such as content management systems, and enterprise applications such as eDiscovery. There's never been an easier way to collect and deliver content.

CI/O Migrate

Armedia Caliente! fills the CI/O Migrate position in the Content I/O Suite. Caliente! is an automated content migration solution. Content and metadata can be consistently imported from hot folders or databases, and automatically migrated to your ECM repository. For example, with Caliente!, you can designate certain folders on the file system as hot folders. Caliente! monitors each hot folder and applies the appropriate task on content as it arrives. Users can now simply drag and drop files into local folders to insert them into the repository, eliminating the need to learn an extensive ECM interface.

CI/O Deliver

Armedia's Ligerio product fills the CI/O Deliver position in the Content I/O suite. Organizations challenged with making content from legacy repositories available on intranets and external websites often struggle with traditional publishing tools. Armedia Ligerio CI/O Deliver Server offers a fresh approach to the challenges of integrating content management systems with web, portal and enterprise applications. Armedia Ligerio CI/O Deliver Server changes the publishing model by serving new content directly from a repository to a caching server, eliminating the need to publish files. Armedia Ligerio CI/O Deliver Server can then be configured to cache content for efficient delivery according to security and business policies.

Collect. Migrate. Deliver.

Content I/O Suite

Content I/O SUITE

Built For Maximum Productivity

Connectivity

Armedia Content I/O Suite helps you manage all of your content while capitalizing on your current infrastructure investments and processes, as well as newly released technologies. We are constantly adding the latest industry technology standards to ensure your ECM investment continues to provide your organization positive returns.

Simplicity

Our solution is based on ease of use, enabling you to manage your content through intuitive user interfaces and speeding user adoption of your ECM deployment.

Flexibility

Armedia Content I/O Suite is suitable for many diverse environments. Integration flexibility enables effortless solution interoperability, so when your needs change, Armedia Content I/O Suite can easily be adapted and evolve with them.

Compliance

Meeting compliance regulations is a key reason why many organizations implement an ECM solution. Armedia Content I/O Suite continues to assist in meeting new compliancy regulations and laws.

Scalability

As your business needs grow, rest assured knowing our solution can scale to meet your requirements with minimal new IT investment.

Reliability

Backed by superior customer and technical service, Armedia Content I/O Suite provides the most reliable content collection, migration and delivery solution in the industry.

Security

Maintaining the integrity of content and access to that information is paramount to the success of your organization. Armedia Content I/O Suite not only leverages the current security features of your ECM repository, but also provides its own set of additional security features to guarantee your content is safe and secure.

About Armedia LLC

Armedia is a content management software and consulting company focused on enabling organizations to achieve success by maximizing the value of their content.
